Why JetRockets?

We launch award-winning web and mobile applications.

JetRockets develops bespoke solutions for your ideas by using reliable technology tools and efficient approaches.

Our team is equipped to handle every step of the development process, from brainstorming and designing the perfect look and feel, to making sure everything runs smoothly through testing and integration. Even after your app is up and running, we're here to provide ongoing support and keep things up-to-date as needed.

We care about your product success. Partnering with us, you not only hire a team of developers, you hire the whole company of 80+ professionals. Dedicated project managers will lead you to the undeniable success.

Product Design

Tech Audit & Project Rescue

Say hello to a brighter future for your project! With our comprehensive approach, we'll ignite your project's success. Our experts will delve into your business needs, perform thorough gap analysis and code reviews, and craft the perfect plan to propel your project towards completion.

Product Design

Unleash the power of design and take your product to the next level! With our expertise, we'll craft an experience that's not only attractive and functional but also incredibly user-friendly. Get ready to captivate your audience and dominate your market with a product that truly shines.
Web & Software Development

We offer end-to-end custom web solutions that deliver convenient and user-friendly platforms without the hassle of setting up an in-house IT department.

Say goodbye to the time-consuming and costly process of recruiting, expanding your office, and purchasing additional equipment. With JetRockets, you'll get everything you need to take your software to the next level, without any administrative headaches.

Our flexible engagement models are designed to fit any business.
Mobile App Development

Transform your mobile presence with the power of expert engineering! Whether you're starting from scratch or revamping your current app, we've got you covered. Our team will craft a customized solution with all the features, integrations, and modifications you need to take your mobile experience to the next level. Get ready to unleash a truly impressive mobile app that sets you apart from the competition.
MVP Builder

Launch your MVP with confidence and success! As a leading provider of reliable MVP Development Services, we bring together the right mix of product strategy, development, testing, release, and continuous maintenance and support. Optimize your path to market with our expertise, knowledge, and skills. From day one, we'll be there to support you every step of the way, ensuring your MVP stands out and exceeds expectations.
Fractional CTO

Fractional Chief Technology Officer (CTO) is a part-time or contract-based CTO who provides an organization with technology leadership and strategic guidance. Fractional CTOs participate in high-level decision-making and act as a liaison between the technology teams and upper management, overseeing a wide range of areas such as IT security, technology contracts, scalability, maintenance, and daily operations. Companies usually engage with Fractional CTOs through contractual or temporary arrangements.

Algorithmic Crypto Trading

In the dynamic landscape of cryptocurrency trading, JetRockets' client sought to modernize and amplify its cryptocurrency CLI trading bots on Bitfinex crypto exchange.

To tackle this challenge, our team harnessed their expertise in Ruby and embarked on a mission to enhance the project's capabilities. A pivotal solution emerged in the form of the Exchange Simulator, an additional standalone service leveraging historical exchange data to test bots in realistic market conditions without financial risks.
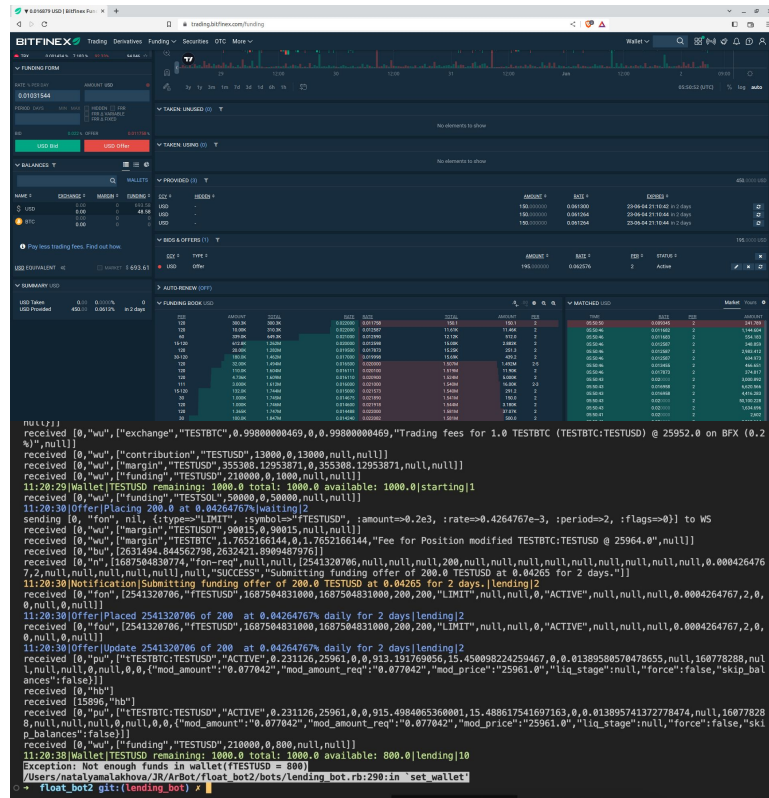

Diverse Expertise in LLMs

JetRockets excels in crafting versatile Large Language Models (LLMs) spanning diverse industries. Our LLM development caters to tailored solutions for fintech, real estate, healthcare and retail. As JetRockets expands, our proficiency in deploying LLMs across different industries also increases.
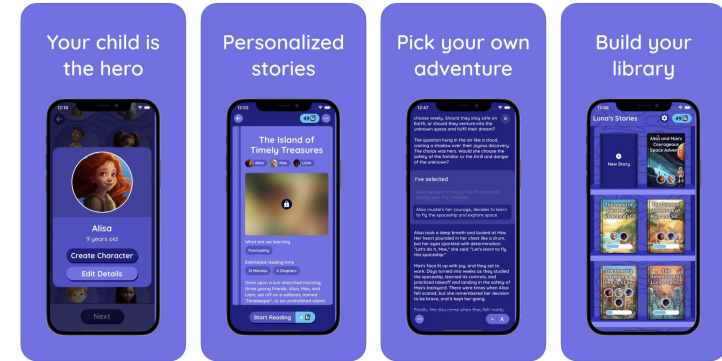

- Fintech/Real Estate (LendingOne - LLM tool for investments risk management)

- Healthcare (CT Research study for a medical company)

- Fashion & Retail (Stailist - AI-powered LLM human visual characteristic analyzer for fashion style recommendations based on various text parameters and photos/images.)
Integrated AI Solutions

We specialize in integrating AI tools into B2C and B2B platforms. Our adaptive approach tailors AI integration to individual industry needs, whether it's healthcare, real estate, entertainment, or education. Our track record speaks volumes, showcasing successful AI implementations that optimize operations and reshape customer experiences.

- Real Estate (AI Sales Bot for Real Estate company)
- Entertainment (Luna Stories app - AI-generated bedtime stories)
- Healthcare (Audio-to-text transcription tool, proof-of-concept)
- Healthcare (Image recognition AI tool for enhancing children safety in India)
- Education (Hebrew University - Research study)

Our Development Process

| Discovery & Planning	Design	Development & Integrations	Testing	Maintenance & Support
In the initial software development phase, gathering business requirements is essential. The team focuses on user needs, usage scenarios, data, and desired outputs. This information creates an initial software outline, undergoes validation, and leads to a requirement specification document for the next development stages.	In the next software development phase, the draft design is crafted, covering system, UX/UI design, hardware, and architecture considerations. This informs the subsequent phase, where testers create test strategies to evaluate functionality and user interface elements.	The work following the design stage is divided equally into various units and modules. This is the stage where actual coding begins. The main focus of the phase is the development of perfect codes by the developers. This particular phase is the longest in the entire protocol.	Understanding software development necessitates acknowledging the significance of the testing phase, a critical step for developers. Any issues or errors detected during testing may result in iterative coding, encompassing various types of testing like integration, unit, system, acceptance, and non-functional assessments until the project is finalized.	After customers begin using well-developed software, issues may gradually arise, necessitating occasional maintenance for the finalized product or software. This doesn't imply corruption but rather regular problem-solving.

JR

Agile methodology

There is only one way to build successful project and stay ahead of the competition:

Build. Test. Iterate. REPEAT.

Agile culture helps us to handle uncertainty more efficiently and makes our team more Adaptive, Flexible, and Innovative. We specialize in developing full-stack, hybrid, and native applications. If your existing business should be digitally transformed by integrating with legacy systems or robust environments are to be built from scratch, we approach complex challenges with prime focus on delivering user-friendly digital solutions.
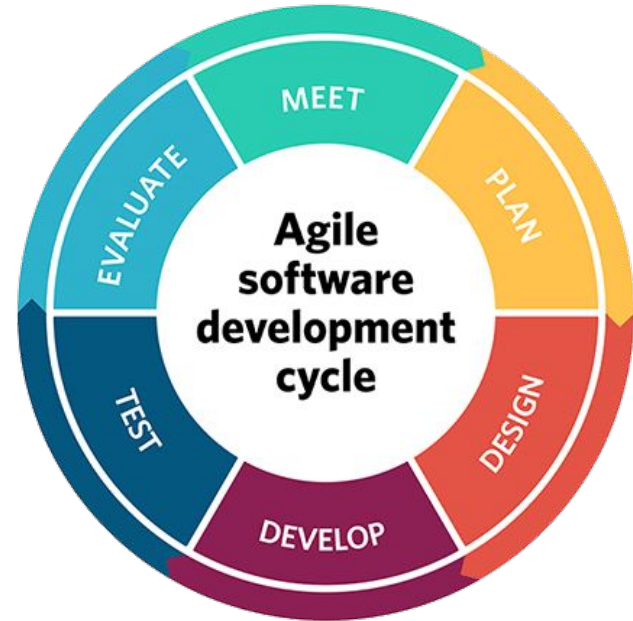

Project Management

At JetRockets, we believe that client engagement and full transparency are key to the project success. Below are some of the techniques we use to keep our clients engaged:

- A dedicated project team that includes a **Project Manager, Engineers** and **QA Testers** are assigned to the project on a **full-time basis.**
- Project Scope and development tasks are managed via **Asana** with your full access.
- **Daily team meetings** are held to discuss progress, issues, solutions and next steps.
- **Regular** status updates are delivered to the client.
- A **weekly** status update meeting is held between the **team** and the **client**.
- A staging environment is **maintained** and **access** is provided to you on an ongoing basis so that you can monitor the progress and provide **timely** feedback.
- Project Manager is available via **Phone/Email/Zoom/Slack** during normal business hours.

Bastion
Fund Accounting Platform
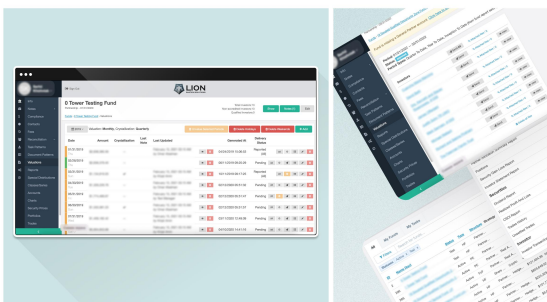

LendingOne.com
Custom CRM, Loan Origination System

ebaymag
# Platform for business listings

ebaymag is an efficient tool to help online sellers increase sales on ebay, manage stock, and optimize shipping. The application makes it easy for users to list items and manage sales across international ebay sites and enables order management and logistics optimization.

We continue to collaborate and further evolve the ebaymag platform. As the e-commerce landscape continues to evolve, we assist **ebay** in maintaining the efficiency of the ebaymag tool and update its correlating technology as necessary. Through our continued collaboration with ebay, we are able to offer online sellers a platform that satisfies all of their business and personal listings alike.

28

Safari Portal
# Travel management platform
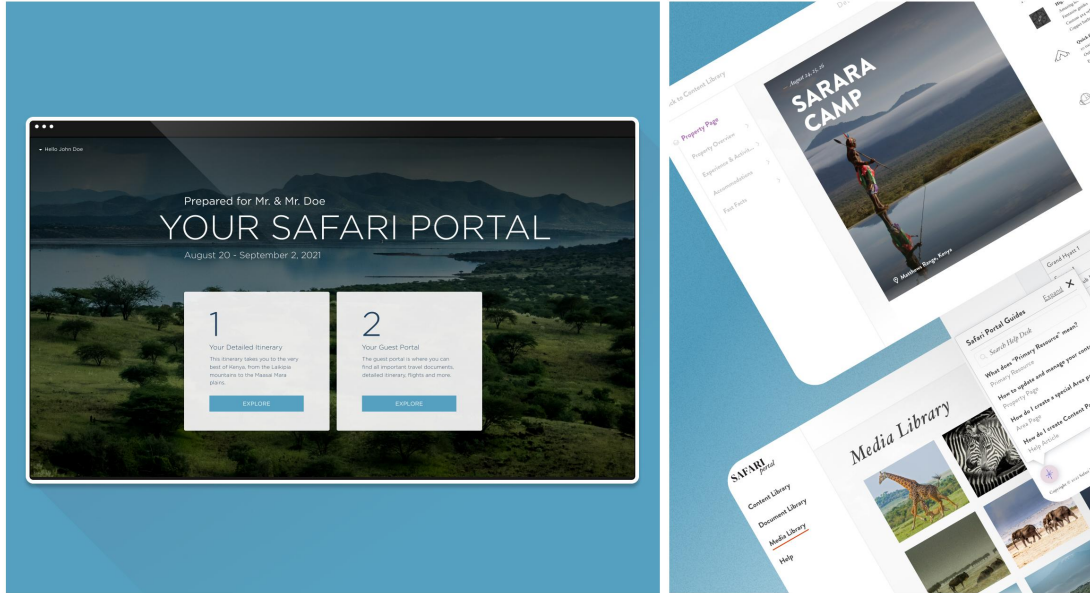

Safari Portal is an easy-to-use itinerary builder software that allows travel agents and tour operators to create stunning interactive digital itineraries and print-friendly PDF proposals in minutes. The company was created by a team of travel professionals looking for a smart and unique solution to their own problems.

Today, **Safari Portal** and JetRockets continue to expand the existing platform with new and exciting features on an ongoing basis. We are currently designing the architecture for a new itinerary layout. Stay tuned!

We turn ideas into reality

The Gut Stuff
Gut Health Tracking App
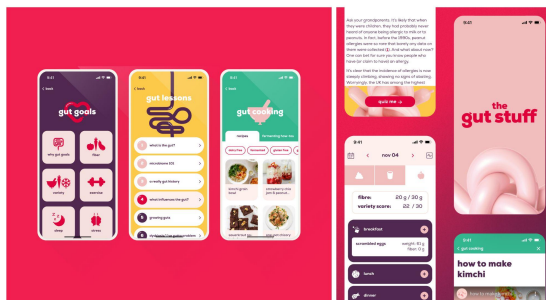

Zumi
Fintech Mobile App

**AskJack, TaskJack, JackPro**
Marketplace

Leaderboard Golf
Social platform for golf

Pano Med
Telehealth, App for medical professions and patients

LuxLock.com
Luxury retail experience platform

Zumi
Fintech Mobile App

Zumi is a consumer app that augments the in-store experience for consumers and allows small businesses across verticals to improve relationships with their customers. The initial Alpha product focuses on relevant rewards at all your favorite merchants that are automatically redeemed.

The intuitive design makes it easy for users to navigate through the process, and industry-standard security measures ensure that users can trust the app with their financial information.

Learn more about Zumi app

The Gut Stuff
Gut Health Tracking App
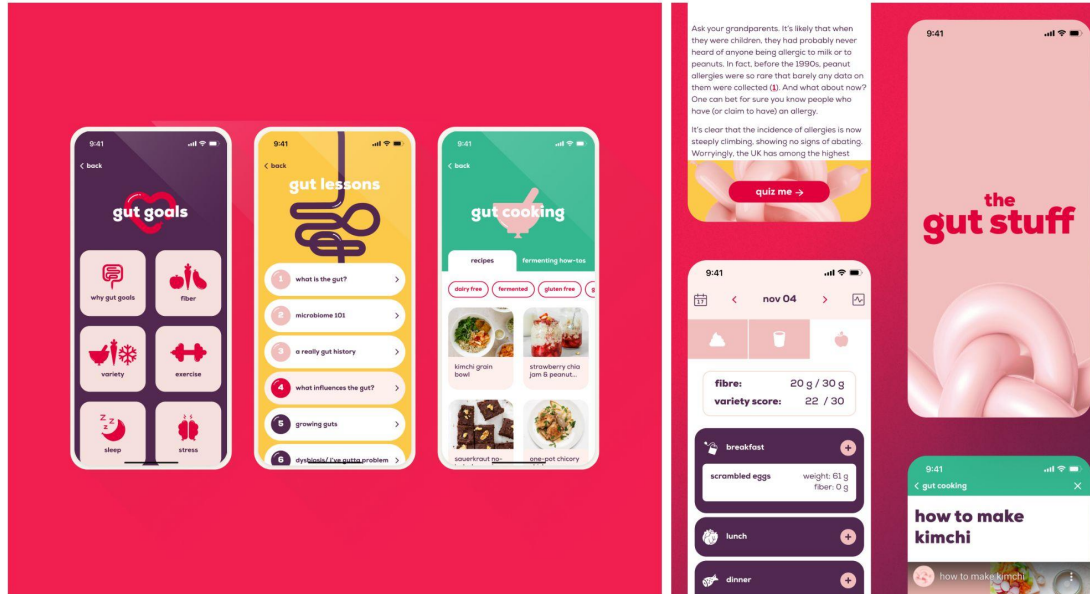

Released in January 2023, **the Gut Stuff** is an easy-to-use application that assists users in understanding their gut health, seeking advice, and forming healthy habits through gut lessons, gut goals, gut cooking methods, and much more.

Today **the Gut Stuff** team is on a mission to help empower anyone to change their gut health based on their unique needs and lifestyle. As part of this, the team wanted to create an application that educated users on their gut health, while also acting as a service to those seeking advice, personal health tips, and more.
